AI SYSTEMS PILOT

Three Working Concepts. One 90-Day Window.

A preview of what's already buildable at Gerrys Roofing & Siding, and what it takes to get there.

Prepared for Gerrys Roofing & Siding leadership

Concept preview — details of build and design withheld pending engagement

WHERE THE MONEY IS LEAKING

Three Everyday Frictions Already Costing Real Money

A ringing phone nobody answers

Every unanswered call during a busy day or after hours is a lead that may already be calling the next company on the list.

Onboarding that lives in one person's head

Training happens by tagging along with someone experienced. It works, but it's slow, inconsistent, and expensive every time someone doesn't work out.

Marketing spend nobody's actually measuring

Canvassing, referrals, storm response, ads — money goes into all of it, but almost nobody at this size can say which one actually produces the most profitable jobs.

None of these need a new department. They need three focused tools, built to fit how this company already runs.

CONCEPT ONE

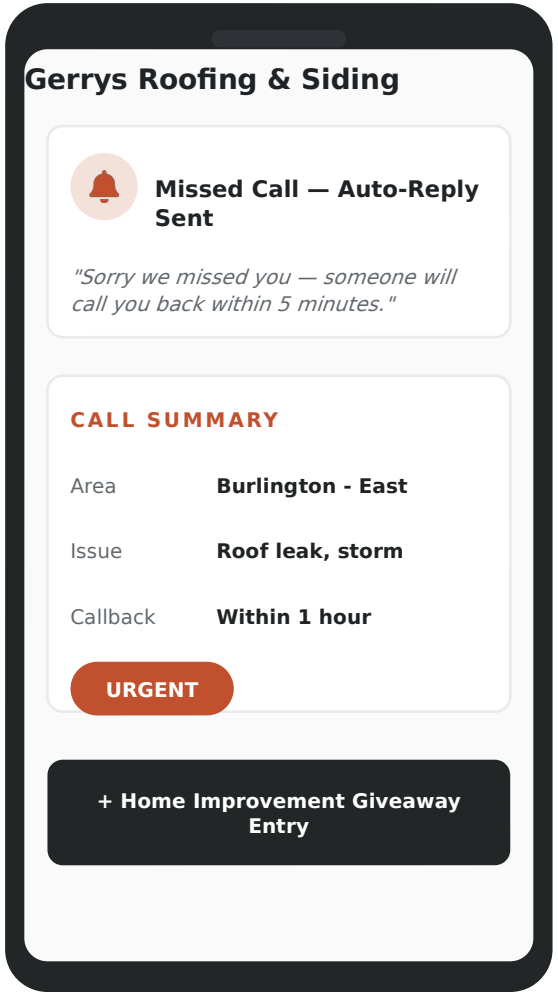

Never Lose a Lead to a Busy Line

Speed-to-Lead AI Phone Assistant

Answers or instantly follows up on any call the team can't get to, whether it's after hours or the middle of a busy afternoon. Captures what the caller needs, routes it to the right person, and keeps the lead warm instead of losing it to the next name on their list.

- Missed-call auto text-back, so no caller is left wondering
- Structured call summary routed to the right person or department
- Optional giveaway/promo hook to make callers glad they left a message

LIVE DEMO AVAILABLE NOW

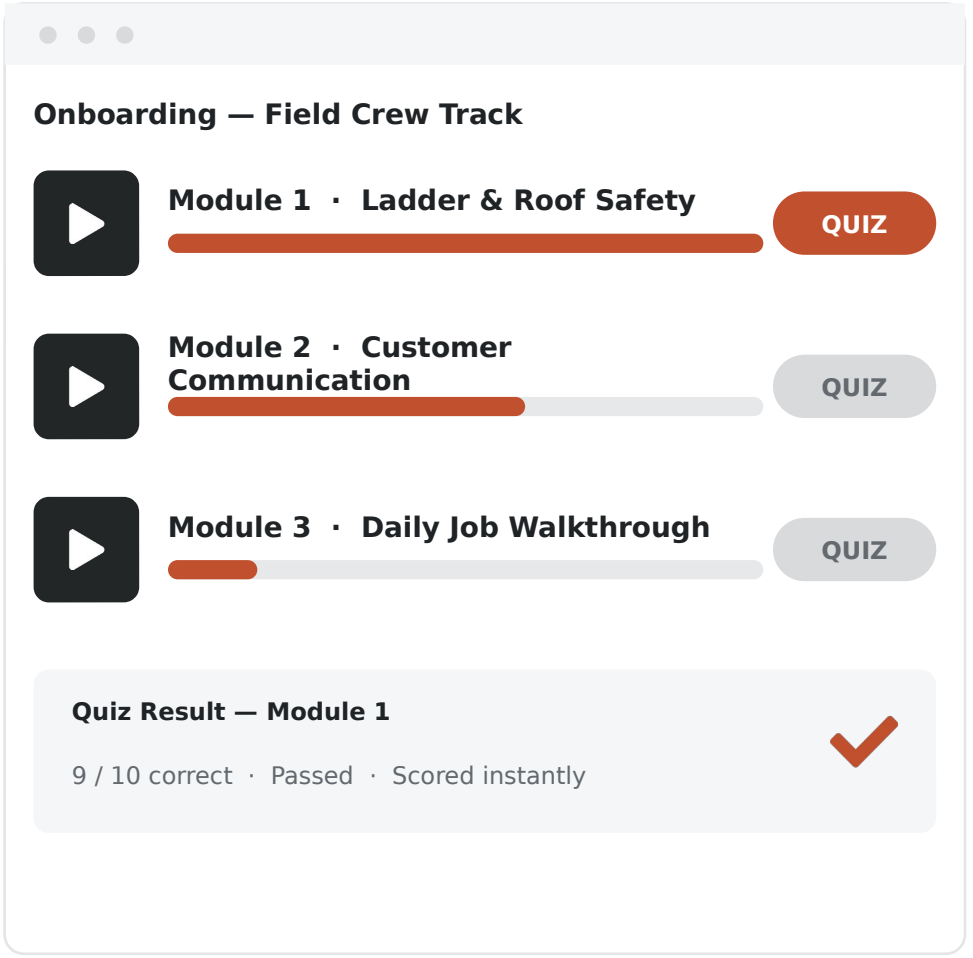

CONCEPT TWO

Onboarding That Doesn't Live in One Person's Head

Video + Quiz Training Modules

Real trainers, real jobs, captured once on video with voiceover walkthroughs, then packaged into modules any new hire can complete before their first day costs the company anything. Each module ends in a short quiz that's scored instantly, so management sees who's actually ready before a mistake gets expensive.

- Built from the department that's most expensive to onboard first
- Works as self-paced remote lessons or an in-class session with instant quiz scoring
- One recorded walkthrough with a trainer becomes a reusable asset forever

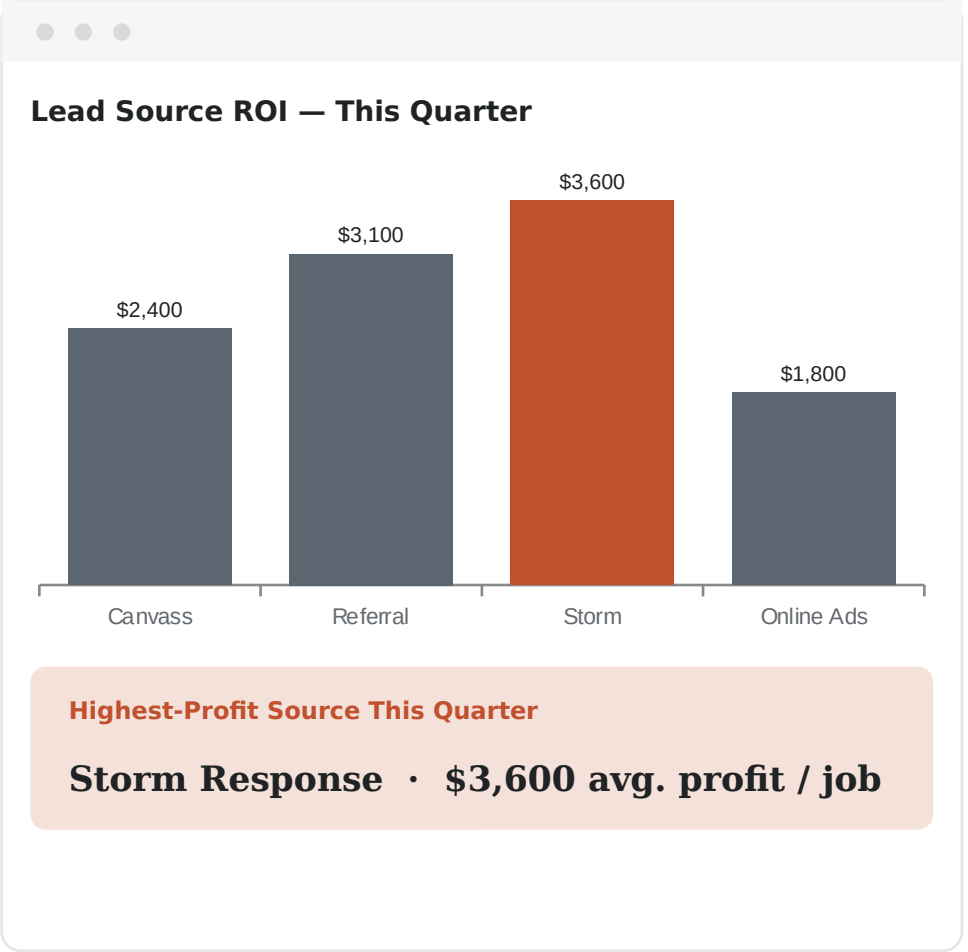

CONCEPT THREE

Know Which Leads Are Actually Worth Chasing

Lead-Source-to-Profit Dashboard

Ties every lead source, canvassing, referrals, storm response, ads, to what it actually produced: close rate and job profit, not just lead count. Answers the question almost nobody at this size can answer with confidence: where should the next marketing dollar actually go?

- Pulls from systems already in use, no new platform to adopt
- Turns gut-feel marketing decisions into a number everyone can see
- Built by someone who already thinks in charts and patterns, not just guesses

THE PLAN

A Phased Build, Not an Open-Ended Ask

1

DAYS 1–30

Audit & First Build

Sit with the people who run each process today. Ship the phone assistant first, since it's the fastest-moving one, and start capturing onboarding footage.

2

DAYS 31–60

Expand & Pilot

Roll out the training modules for the highest-turnover role. Stand up the first version of the lead-source dashboard using existing data.

3

DAYS 61–90

Measure & Decide

Report real numbers against Day 1 baselines. Decide together what scales, what changes, and what comes next.

THE INVESTMENT

A Defined Pilot Budget, Not a Blank Check

Engagement length

60 days, with a 90-day extension option based on results

Base rate

A standard hourly rate for time spent building and piloting

Tools & development fund

A modest one-time fund for software and equipment needed to build, all of which the company keeps

Ongoing platform costs

Usage-based (phone minutes, hosting) — far below a typical agency retainer

THREE TOOLS.

ONE PILOT BUDGET.

Structured check-ins at Day 30, 60, and 90 keep this measurable instead of open-ended. All tools, accounts, and materials built stay company property.

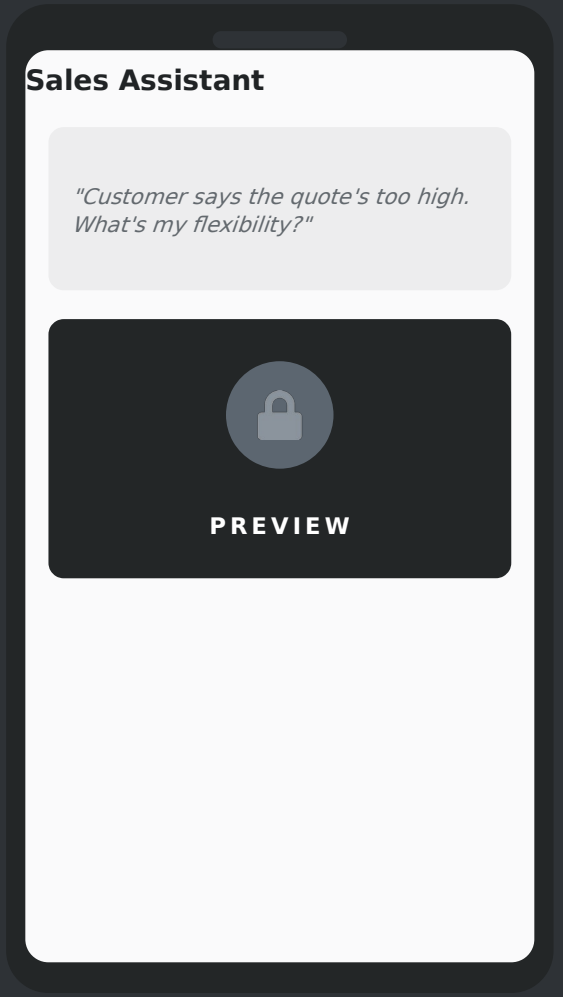

LOOKING AHEAD

What Comes After the First Three

Sales Close-Pattern Assistant

A tool built on this company's own history of what actually closes deals, what pricing flexibility already gets approved, and what talking points work on hesitant leads. It gives reps a fast, on-brand answer without pulling ownership into every small decision.

Scoped and ready to explore as part of an extended engagement. Not part of the initial 90-day build.

WHY IT WORKS THIS WAY

Built From the Inside, Not Sold From the Outside

Already Embedded

This isn't a stranger learning the business on the clock. The build happens alongside the people already doing the work every day.

Fit to How Things Actually Run

Every tool is shaped around this company's real processes, not a generic template sold to every trade company in the province.

Faster Than an Outside Firm

No proposal cycles, no account manager, no monthly retainer. Feedback on Monday can be a change by Wednesday.

Already in Motion

The design and build approach for all three concepts is already worked out and ready to move the day terms are agreed.

NEXT STEP

A Simple Next Step, Not a Big Leap

1. Review the attached pilot terms and adjust anything that doesn't fit.

2. Pick which of the three concepts starts first.

3. Agree on the 60-day start date. Everything else follows the plan already laid out.

A draft engagement outline is included separately for review — a starting point for discussion, not a final offer.

Three tools. Ninety days.
Built by someone already in the building.

Let's pick a start date.
